Right Care Initiative Goals

Achieve 80 % in good control, or “A Grade” (90th Percentile) HEDIS levels for Cardiovascular Disease and Diabetes, whichever is greater:

- ❖ 80% of hypertensive patients with blood pressure (BP) controlled: <140/90 mmHg (Optimally 130/80 mmHg per 2017 American College of Cardiology Guidelines, endorsed by ACC/AHA/AAPA/ABC/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA)
- ❖ 80% of diabetic patients with blood sugar controlled: Hemoglobin A1c<8
- ❖ 80% of patients with diabetes and/or cardiovascular conditions on appropriate cholesterol therapy (proxy, LDL controlled: LDL-C<100mg/dL. Or for very high risk ASCVD, LDL-C<70mg/dL or lower)
- ❖ Proactive Community Outreach to Screen & Identify Vulnerable Patients to Connect to Treatment & Support
